

# How to Fold Origami Dice

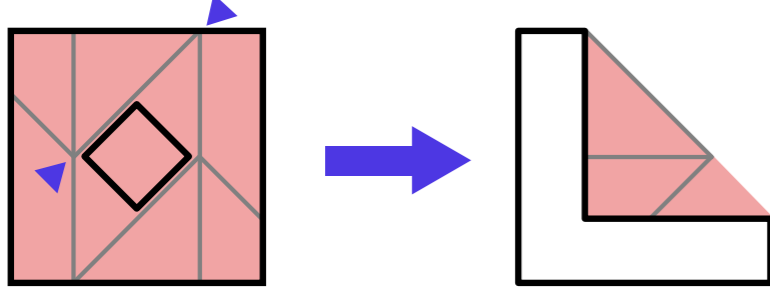

Check out [iheartprintandplay.blogspot.com](http://iheartprintandplay.blogspot.com) for more free print and play material.

\* For the purpose of these instructions, the face side of the die is colored red and the backside is white.

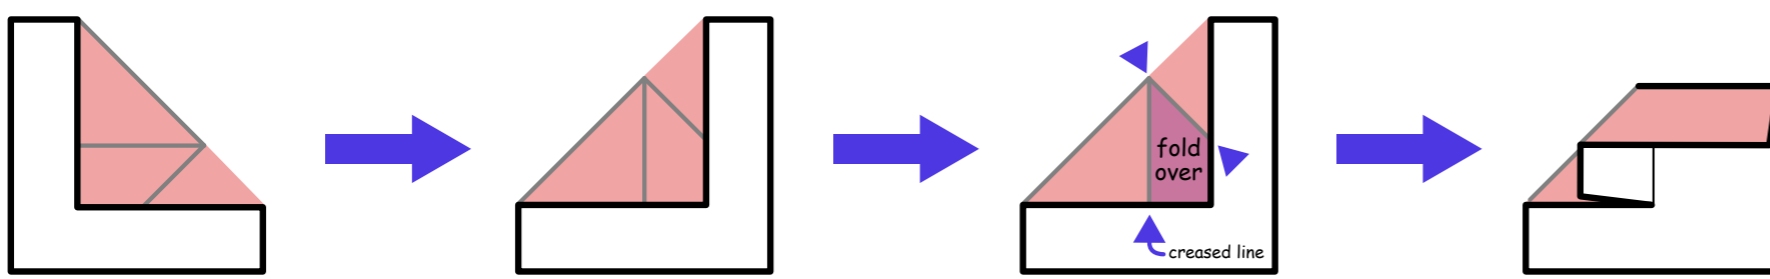

1 Fold the sheet along both of the vertical gray lines, then unfold them. We just need a crease along those lines.

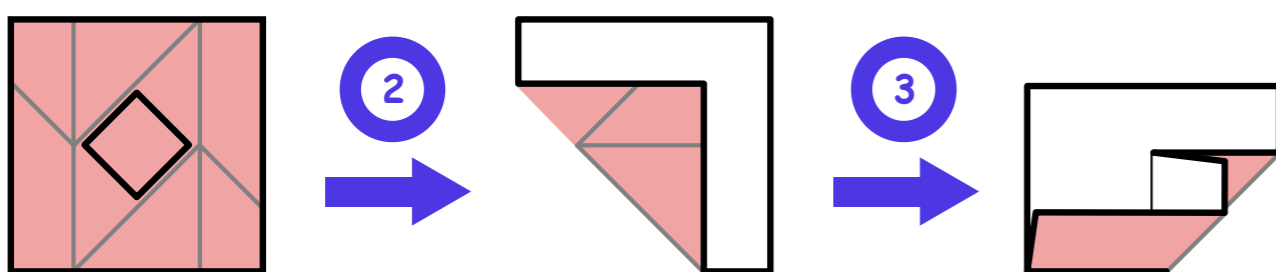

2 Flip the sheet over, then take the top right corner and fold it along the long diagonal line as shown below.

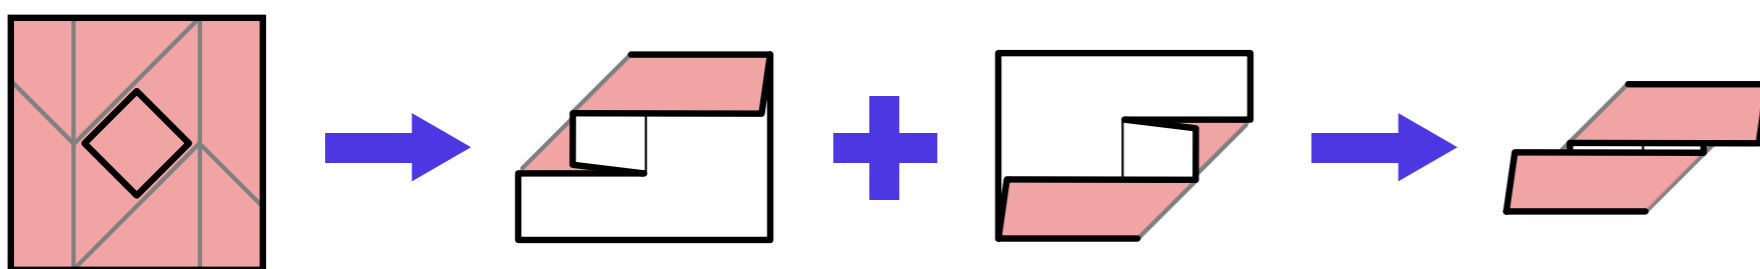

3 Rotate the sheet 90° counter-clockwise. Now take the corner you folded over and fold over the crease you made in step 1 (the vertical gray line) while also folding along the other gray line.

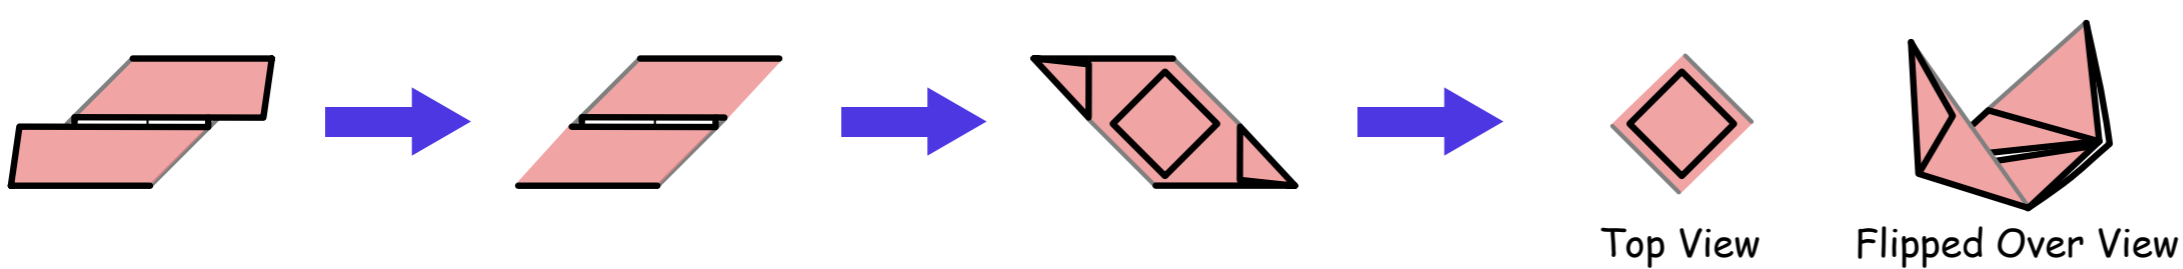

4 Unfold the folds you made in step 2 and 3, then repeat steps 2 and 3 using the opposite corner of the sheet.

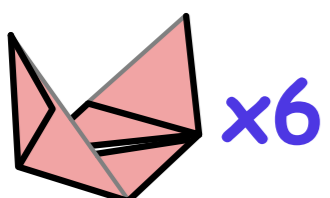

5 Unfold again all the folds you've made so far. Now at the same time, re-fold both corners as you did in steps 2 and 3 so that the sheet looks like the image below.

6 Fold the end flap corners over to form a point. Flip it over and fold the ends back to form a square. The ends do not need to lie flat; They will be used to fit together with the other sides.

7 Repeat steps 1 through 6 to create a total of six pieces.

8 To assemble the pieces together, slip the pointed end of one piece into the little pocket that is under the middle of another piece. Continue to fit them together until it's a complete cube. Don't be afraid to bend the flaps as needed to position them for sliding into the pockets of adjacent pieces.
